

MOTIVATIONAL LETTER FOR JOINING S-CUBED

I was introduced to S-Cubed from day one, as soon as I entered university. I began going to as many of their events and activities as possible, and I made life-long friends in the process. I have spent a year as part of the executive, giving back what I was given. I want next year's freshers' to experience the same warm welcome I received in my first year as a science student.

As student relations officer, the needs of the student body were my responsibility. It was my job to make students feel welcomed in our family, our community. Now I want to keep doing this in the new executive next year, where I will work hard on creating new opportunities for others to participate in the university.

I will aim to set up seminars aimed at tackling specific scientific issues, to provide more educational activities aimed at teaching others what science is and show them what we all have learnt to love about it, but above all else to cater for the students who would trust in me and believe in me.
