

## Motivational Letter

When I first decided to get involved in S-cubed, it was always my aim to be part of the activities coordinating team. Being involved in a different number of sub-committees with regards events organised by KSU helped me to understand better how events on campus should be both organised and promoted in order to get more students involved for a better University Life. Thus my aim as an activities co-ordinator was to increase the level of professionalism, upon the already high standards, in organising events as well as having a greater turn-out for our events. With this aim in mind, together with all the other executive members I can proudly say that we all succeeded in doing so.

Thus this year I feel that if I put forward once again my nomination I would be an asset for S-Cubed. I am sure that with my experience as Activities Co-ordinator I will definitely help S-Cubed to keep on working in reaching out all the science students which will eventually increase their involvement in university life and events related to their respective science courses

In conclusion as a result off my past/current involvement in S-Cubed, my satisfactory academic performance, my previous experience with other organizations as well as my background in event organization, I am nothing but an asset to the organization.
